**ECODRIVING – The Concept**

ECOdriving means smarter and more fuel-efficient driving.

ECODRIVING represents a new driving culture that makes best use of advanced vehicle technologies, while improving road safety. An important component of sustainable mobility, Ecodriving considerably contributes to climate protection and pollution reduction.

**ECODRIVING – The Benefits**

- **SAFETY**
  - Improve road safety
  - Enhance driving skills

- **ENVIRONMENTAL**
  - Reduce greenhouse gas emissions (CO2)
  - Fewer local air pollutants
  - Noise reduction

- **FINANCIAL**
  - Save fuel / money (5-15% in the long-term)
  - Lower vehicle maintenance costs
  - Reduce costs of accidents

- **SOCIAL**
  - More responsible driving
  - Less stress while driving
  - Higher comfort for drivers and passengers

**ECOWILL – The Project**

ECOdriving Widespread Implementation for Learner Drivers and Licensed Drivers

ECOWILL aims to increase the number of Ecodriving training programmes in Europe. The project focuses on implementing short duration training sessions (of one hour) and e-learning solutions for drivers of passenger cars and van/light commercial vehicles (LCV) ≤ 3.5t GVM*. Between May 2010 and April 2013, ECOWILL intends to conduct Ecodriving training programmes for licensed drivers in 13 European countries (Austria, Croatia, Czech Republic, Finland, Germany, Greece, Hungary, Italy, Lithuania, Poland, Spain, the Netherlands and United Kingdom).
